Data Visualization with Power BI and Tableau

Practical – I (Curiosity Question)

Roll No.: T016	Name: Himani Malankar
Class: SYIT	Batch:1
Date of Assignment: 24/07/2026	Date/Time of Submission:24/07/2026

AIM:Using a dataset of your choice (CSV format), create an interactive Tableau dashboard that effectively presents key insights from the data.

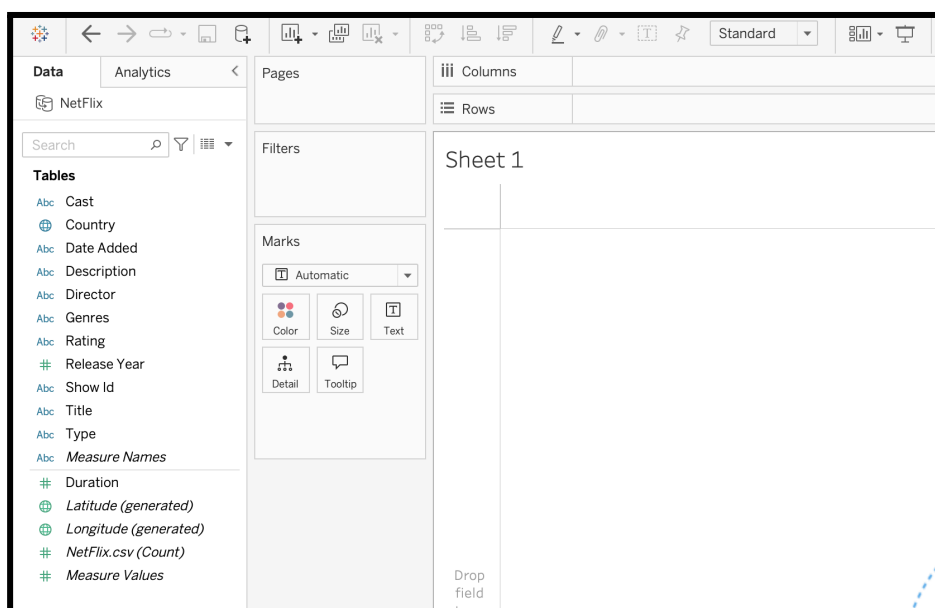

REQUIREMENT:

1. Import your own dataset into Tableau.
2. Identify appropriate Dimensions and Measures.
3. Create at least three different visualizations (e.g., bar chart, line chart, map, pie chart, scatter plot, etc.).
4. Add at least one filter or interactive element to the dashboard.
5. Arrange the charts into a single interactive dashboard with a clear title.
6. Write 3–5 observations explaining the insights gained from your dashboard.

STEPS:

Step 1: Import the Netflix Dataset

1. Open Tableau Public/Desktop.
2. Click Connect → Text File.
3. Select Netflix.csv from your computer.
4. Click Open.
5. Tableau loads the dataset and displays it in the Data Source tab.
6. Verify that all records and columns are imported successfully.

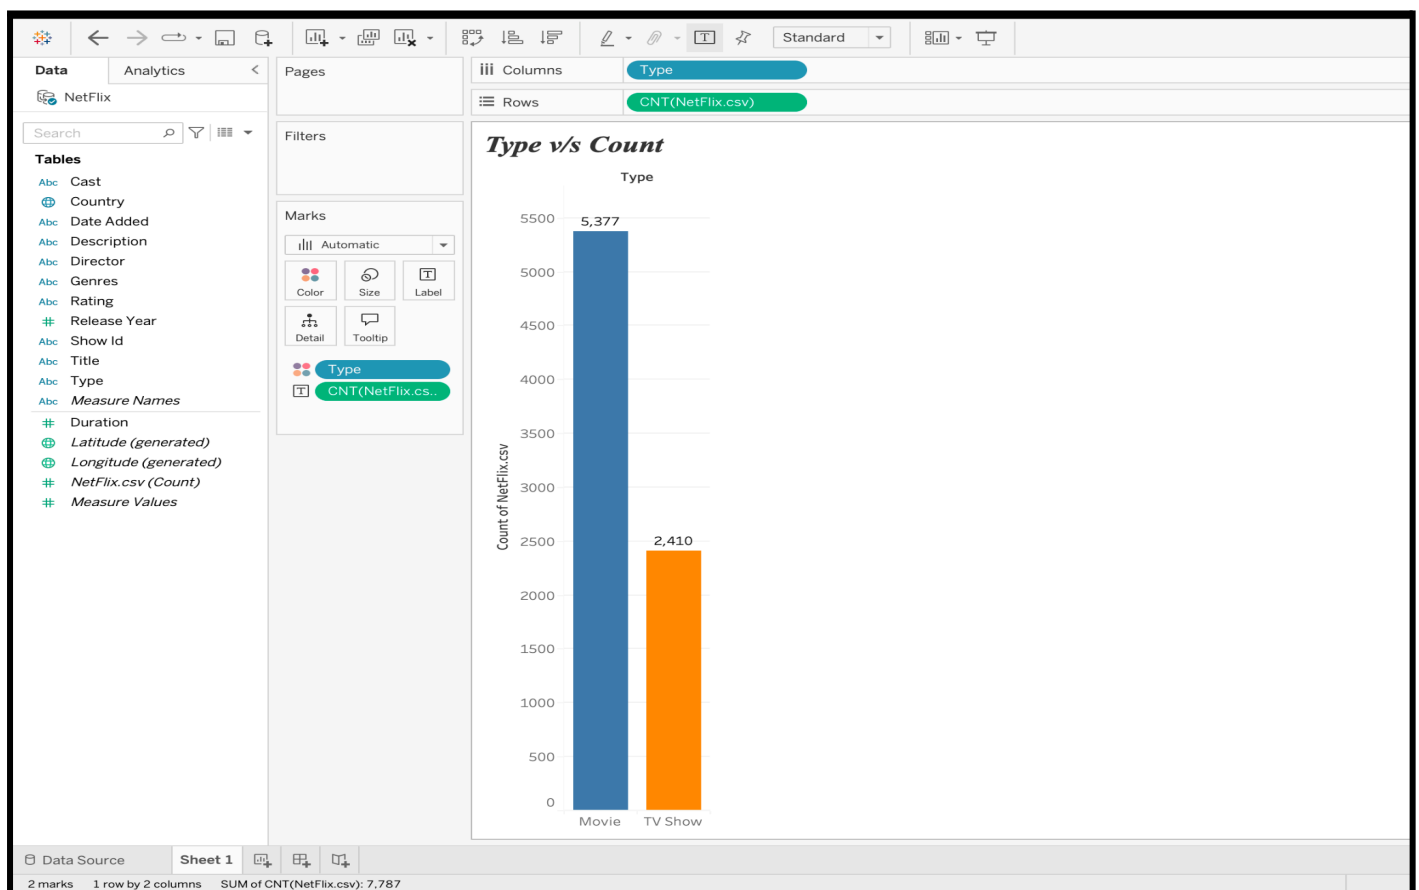

Step 2: Create a Bar Chart (Type vs Count)

1. Create a new worksheet and rename it Type vs Count.
2. Drag the Type field to the Columns shelf.
3. Drag Netflix.csv (Count) to the Rows shelf.
4. Tableau automatically creates a Bar Chart showing the count of each content type.
5. (Optional) Drag Type to Color to assign different colors to Movies and TV Shows.
6. Drag CNT(Netflix.csv) to Label to display the count on each bar.
7. Edit the worksheet title as Type vs Count.

FIELD USED:

Shelf	Field
Columns	Type
Rows	CNT(Netflix.csv)
Marks (Optional)	Color → Type
Marks (Optional)	Label → CNT(Netflix.csv)

INSIGHT:

- Movies are available in much larger numbers than TV Shows.
- The Netflix dataset contains significantly more movie titles than television series.
- This indicates that Netflix's content library is primarily focused on movies.

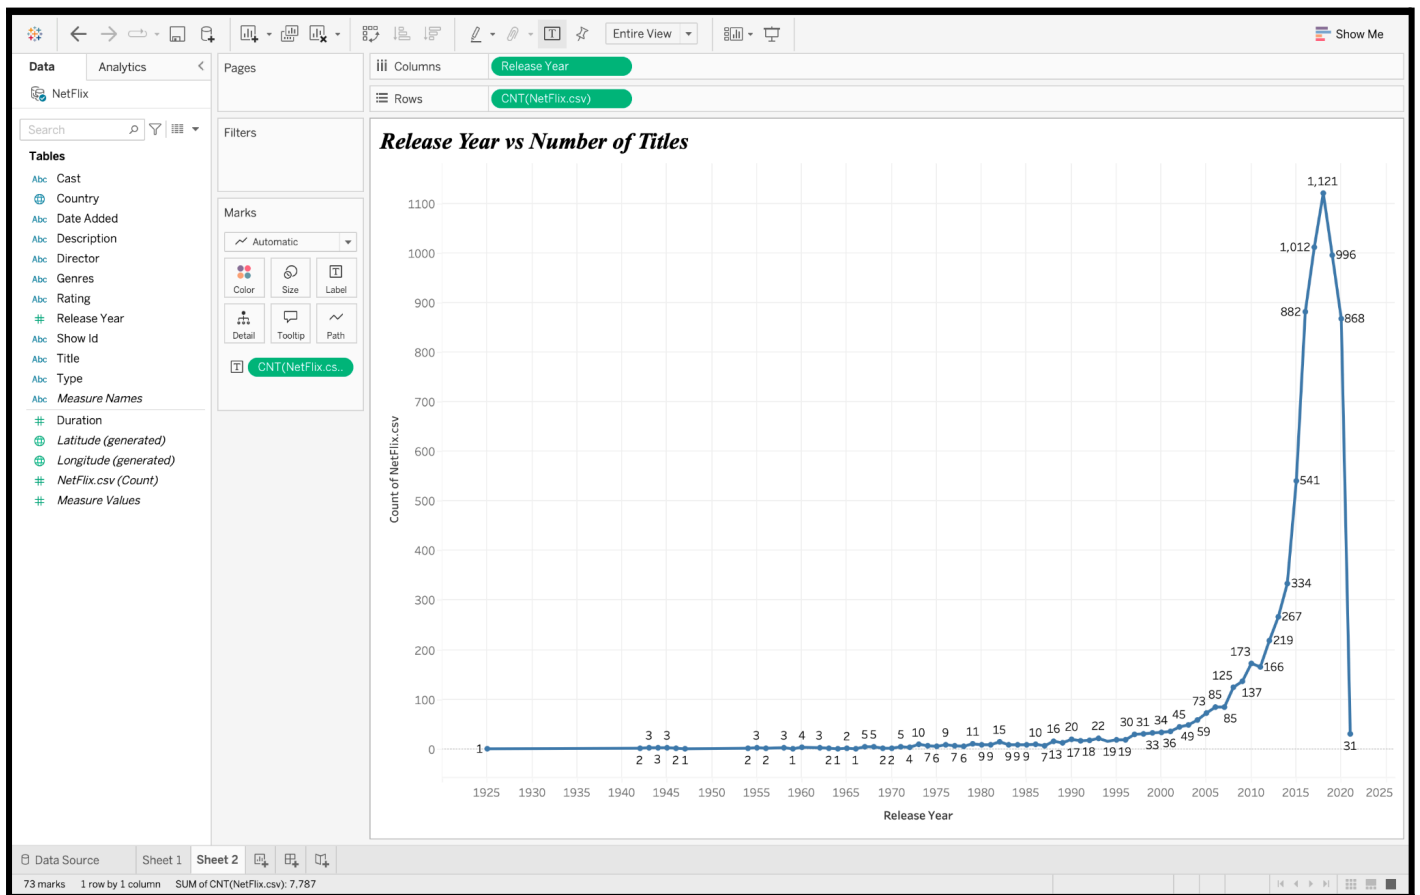

Step 3: Create a Line Chart (Release Year vs Number of Titles)

1. Create a new worksheet and rename it Release Year vs Number of Titles.
2. Drag the Release Year field to the Columns shelf.
3. Drag Netflix.csv (Count) to the Rows shelf.

- From the Marks card, select Line as the chart type.
- Drag CNT(Netflix.csv) to the Label option on the Marks card.
- Enable Show Mark Labels to display the number of titles for each release year.
- Edit the worksheet title as Release Year vs Number of Titles.

FIELD USED:

Shelf	Field
Columns	Release Year
Rows	CNT(Netflix.csv)
Marks	Line
Marks (Optional)	Label → CNT(Netflix.csv)

**INSIGHT:**

- Very few Netflix titles were released before the year 2000.
- The number of titles started increasing steadily after 2005.
- A rapid growth is observed between 2016 and 2020.
- 2020 records the highest number of titles (1,121).
- The value for 2022 is very low (31) because the dataset contains only partial data for that year.

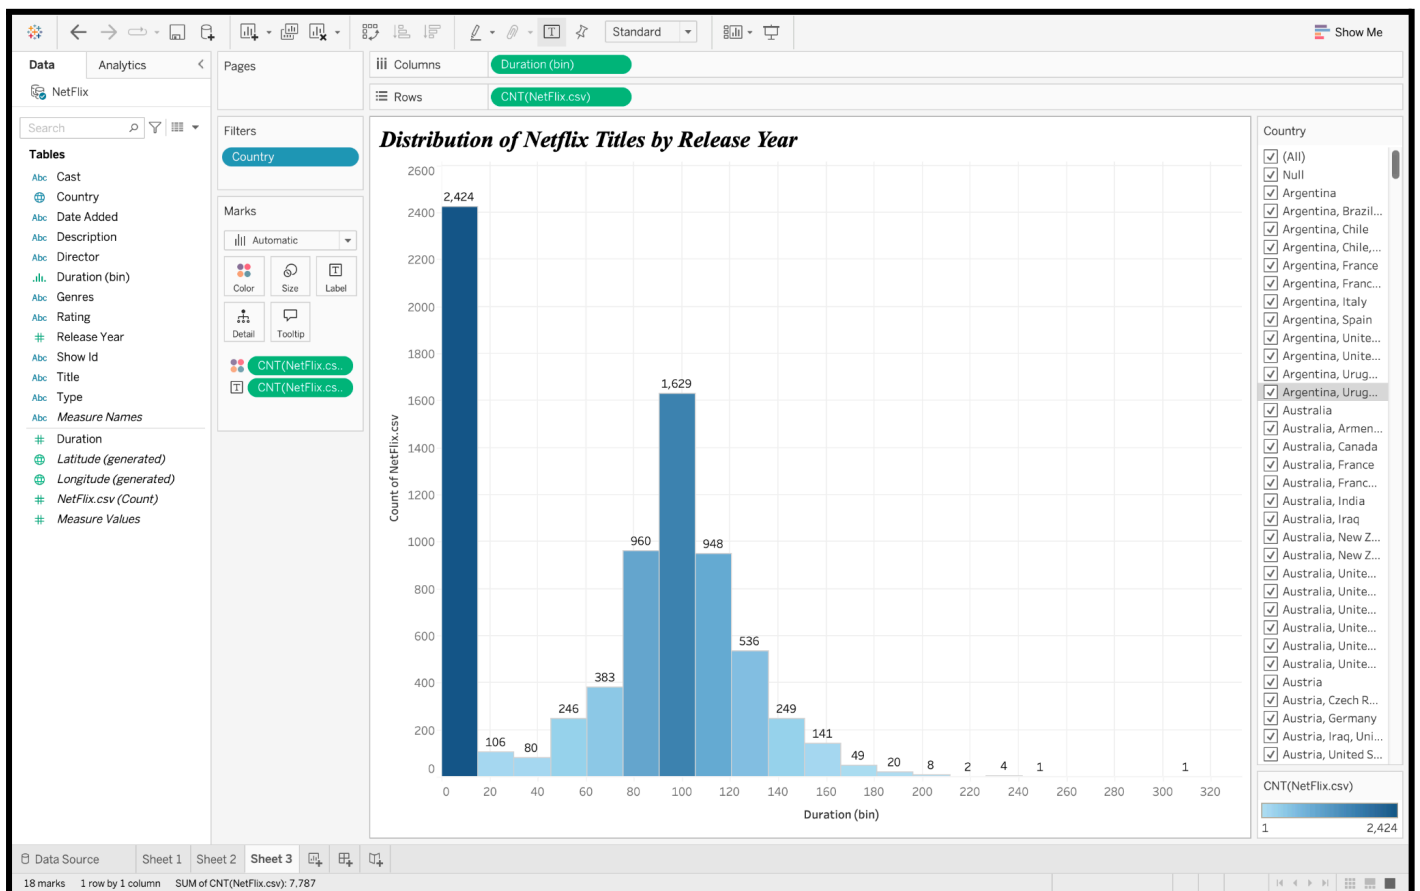

Step 4: Create a Histogram (Distribution of Netflix Titles by Duration)

- Create a new worksheet and rename it Distribution of Netflix Titles by Duration.
- Right-click on the Duration field and select Create → Bins.
- Keep the default Bin Size (or set the desired bin size) and click OK.
- Drag Duration (bin) to the Columns shelf.

5. Drag Netflix.csv (Count) to the Rows shelf.
6. Tableau automatically creates a Histogram showing the distribution of titles based on duration.
7. Drag CNT(Netflix.csv) to Label to display the count on each bar.
8. Drag Country to the Filters shelf and choose Show Filter to make the visualization interactive.
9. Edit the worksheet title as Distribution of Netflix Titles by Duration.

FIELD USED:

Shelf	Field
Columns	Duration (bin)
Rows	CNT(Netflix.csv)
Filters	Country
Label	CNT(Netflix.csv)

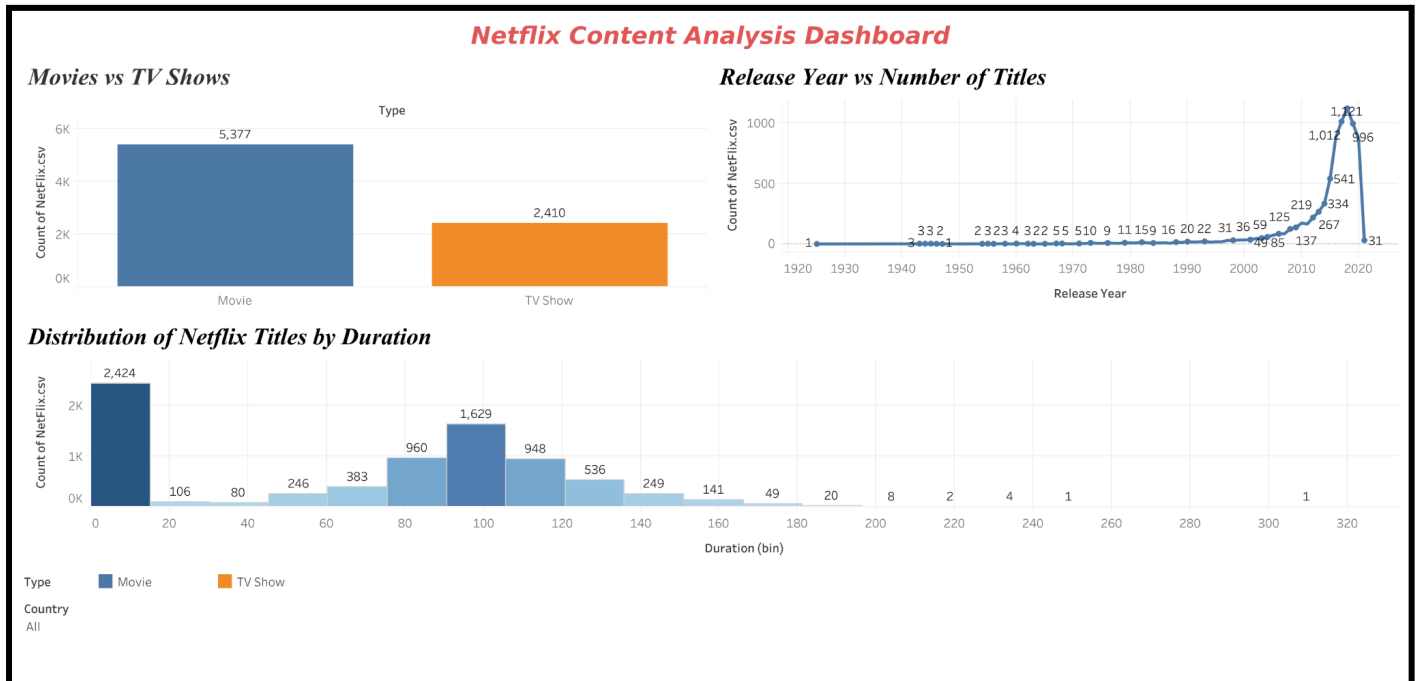

**INSIGHT:**

- Most Netflix titles have a duration between 80 and 110 minutes.
- The 90–100 minute duration range contains the highest number of titles (2,424).
- Very long-duration titles (above 180 minutes) are rare.
- The histogram indicates that Netflix primarily offers standard-length movies rather than very short or very long content.

Step 5: Create an Interactive Dashboard

- Click the New Dashboard icon at the bottom of Tableau.
- Rename the dashboard as Netflix Content Analysis Dashboard.
- Set the dashboard size to Automatic.

- Drag the following worksheets into the dashboard:
- Movies vs TV Shows
- Release Year vs Number of Titles
- Distribution of Netflix Titles by Duration
- Arrange all the charts using the Tiled layout.
- Resize and align the charts for better visibility.
- Add the Country field as a filter and enable Show Filter to make the dashboard interactive.
- Add suitable titles to all visualizations.
- Verify that all charts and filters are working correctly.
- Save the dashboard.

DASHBOARD COMPONENTS:

Visualization	Purpose
Bar Chart – Movies vs TV Shows	Compares the number of Movies and TV Shows available on Netflix.
Line Chart – Release Year vs Number of Titles	Shows the yearly trend of Netflix titles.
Histogram – Distribution of Netflix Titles by Duration	Displays the distribution of titles based on duration.
Country Filter	Allows users to interactively filter the dashboard by country.

OBSERVATION:

Observation 1

The Netflix dataset contains 5,377 Movies and 2,410 TV Shows, indicating that movies make up the majority of the available content.

Observation 2

The number of Netflix titles remained relatively low before 2005 but increased rapidly after 2015, reaching a peak of 1,121 titles in 2020.

Observation 3

Most Netflix titles have a duration between 80 and 110 minutes, with the 90–100 minute duration range containing the highest number of titles (2,424).

Observation 4

Very long-duration titles (more than 180 minutes) are rare in the dataset, indicating that Netflix mainly offers standard-length content.

Observation 5

The Country filter allows users to interactively explore the dashboard and analyze Netflix content for individual countries, making comparisons easier.
